Subject: Fwd: Firecom testimonial.

The Groveland Fire Dept. has recently outfitted and placed in service a brand new Type 1 Fire Engine. We are in the same position as many other small departments in that we have to be very budget conscience in these hard economic times. That being said, we were in no position to buy headsets twice, in case the wireless headsets did not perform up to par. We expressed this concern to Brent Hunter who reassured us the product was top quality; he also offered us a temporary demo. We put the demo in our now second out engine. The headsets performed so well that we bought them to keep permanently wired in that engine. In our new engine we have a wireless for the operator/driver which provides for our hearing protection while pumping without being tethered to the pump panel. We also have a wireless intercom only headset in the back. It is now our policy that the engine backer will have verbal coms with the operator and the same person will be responsible for grabbing the hydrant while being able to talk to the operator. All in all a good buy and a great purchase to increase the safety of the firefighters on the ground.
